SecureCheck Cloud 9 Features

Pay Anywhere, Anytime

Authorize, sign, send, and manage payments from mobile phones, tablets, and pads.

Checks and Electronic Payments

Paper check printing, electronic virtual checks, and ACH payments... it's your choice. Real ACH: The key advantage is that we process the ACH delivery to the banking system. No need for you to format and send files to your bank.

Mobile Efficiency

Use your mobile phone, tablet, or pad to monitor, approve, and sign payments. Eliminates the need to be in the office to sign and approve paper checks. Anytime, anywhere access means you manage and control the release of checks and payments from home, from the golf course, or even on vacation.

Approval Workflow

Replace inefficient, vulnerable, manual processes with reliable, secure approval workflow automation. Text and email notifications mean that you do not need to remember to approve payments.

Instant Notifications to Payees

Instantly notify payees with Payment Remittance sent via SMS and email. No more printing and mailing remittance information! SCC9 automatically emails a payment information link to all payees for ALL payment types, including check and electronic payments.

Signatures and Signature Logic

Signatures are gathered "live" from any touchscreen device (mobile, tablet, pad) during approvals. These live signatures are imaged on the approved checks when printed. Number of signatures are defined based on check amount. Unique logic patterns are used for each checking account.

Event Notifications

Authorized recipients can register to receive important check printing activity on their phone or desktop computers via SMS and email.

Manual Checks

Securely print manual checks from your desktop or the cloud. Automate data entry for previously entered names and addresses using the cloud-based payee address book.

Remote Check Printing

Cloud-based payment processing eliminates the need to print and mail checks. Satellite offices can upload, approve, and print checks using a SecureCheck printing client and compatible printer. Even better, you can enable Payees to print your authorized checks at their site for instant payment.

SecureCheck Compatibility

Compatible with SecureCheck

SCC9 Cloud features are compatible with SecureCheck. No time-consuming, expensive integration needed. If you can print checks today using SecureCheck, then SCC9 can easily bring ACH, mobile, and Cloud capabilities to your check printing and payment processes.

Integrated Positive Pay

Award-winning SecurePay positive pay file creation is integrated and included as a standard SCC9 feature.

Event Log

Tracks all user and system activity; successful or failed user login, modified permissions, updated check outlines, and check print activity.

Windows 10 Compatibility

SCC9 is a perfect 10 - fully compatible with Windows 10 operating system, whether using Edge, IE, or Chrome, access to the Cloud is simple.

Multiple Checking Accounts

Easily create and modify form overlays for multiple checking accounts with 12 objects and 7 graphics for each form.

Enhanced Sorting

Sort payments based on check number, payee, date, amount, file name, or overlay.

Account & Printer Selection

Print mixed-account check runs with auto-selection of correct check overlay and printer.

Security Permissions

Assign administrative and printing permissions based on user role and responsibilities. Double login requirements are also assignable.
